

Windows Server Set Up

Windows Server 2022

Home Lab Project

Created By: Michael M. Predonio
Date: July 06, 2026

Overview

This project demonstrates the deployment and initial deployment and configuration of Windows Server 2022 in a virtual home lab environment. It includes server renaming, static IP configuration, Active Directory Domain Services (AD DS) installation, domain controller promotion, and verification to simulate real-world Windows Server administration.

Objectives

1. Configure network adapters
2. Rename server and verify update name
3. Configure static IP
4. Install Active Directory (*AD DS*)
5. Promote server to a Domain Controller

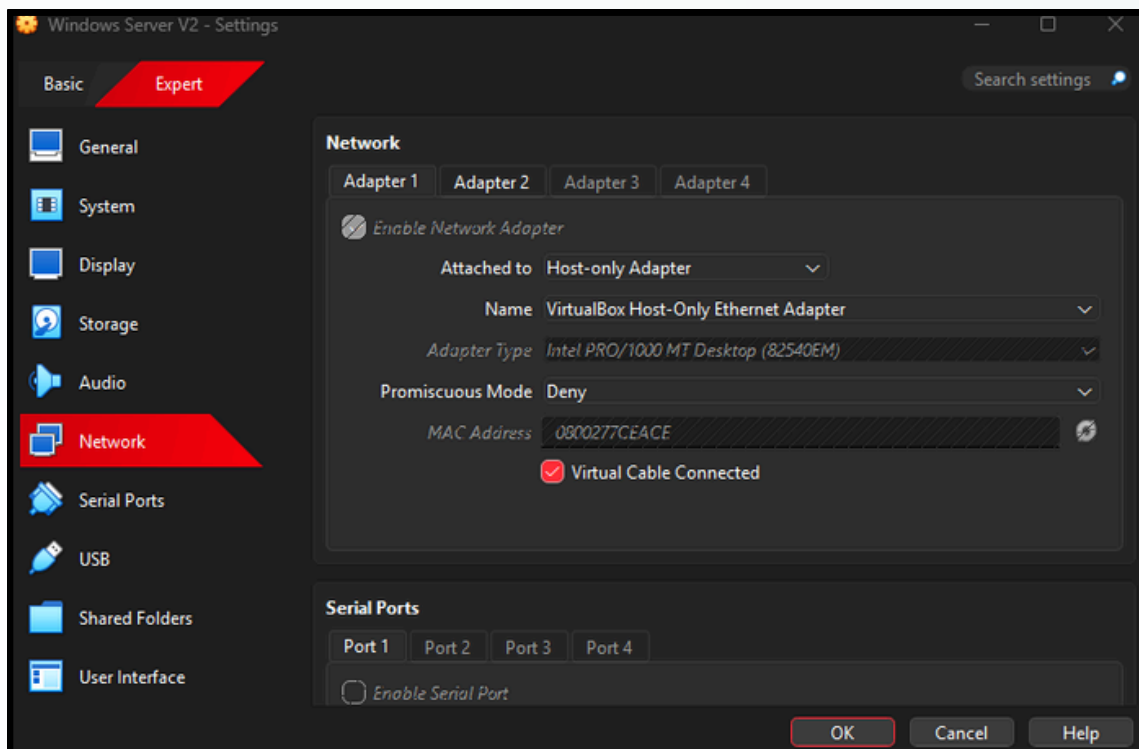

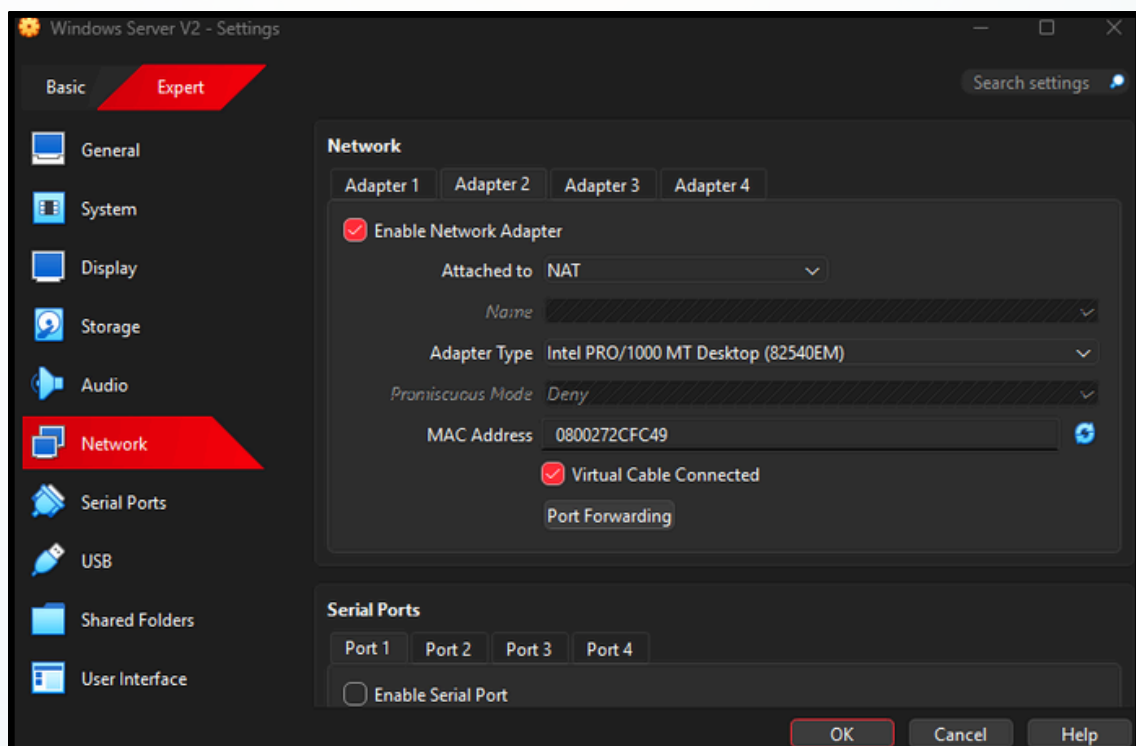

Figure 1. Configuring the VirtualBox network adapters for the Windows Server 2022 virtual machine.

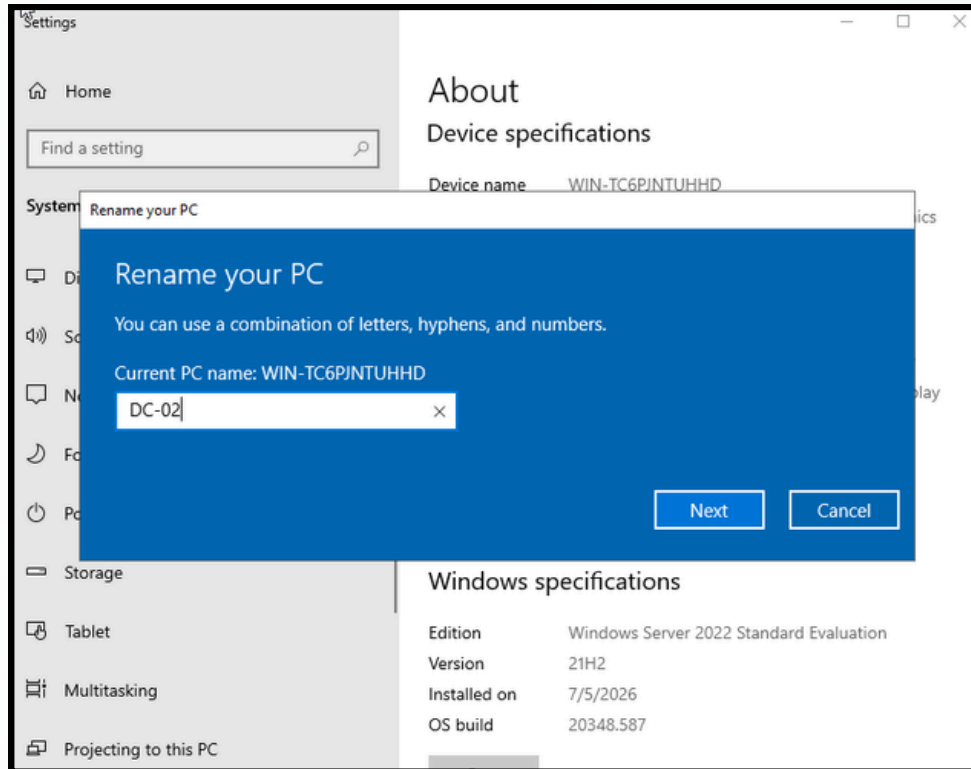

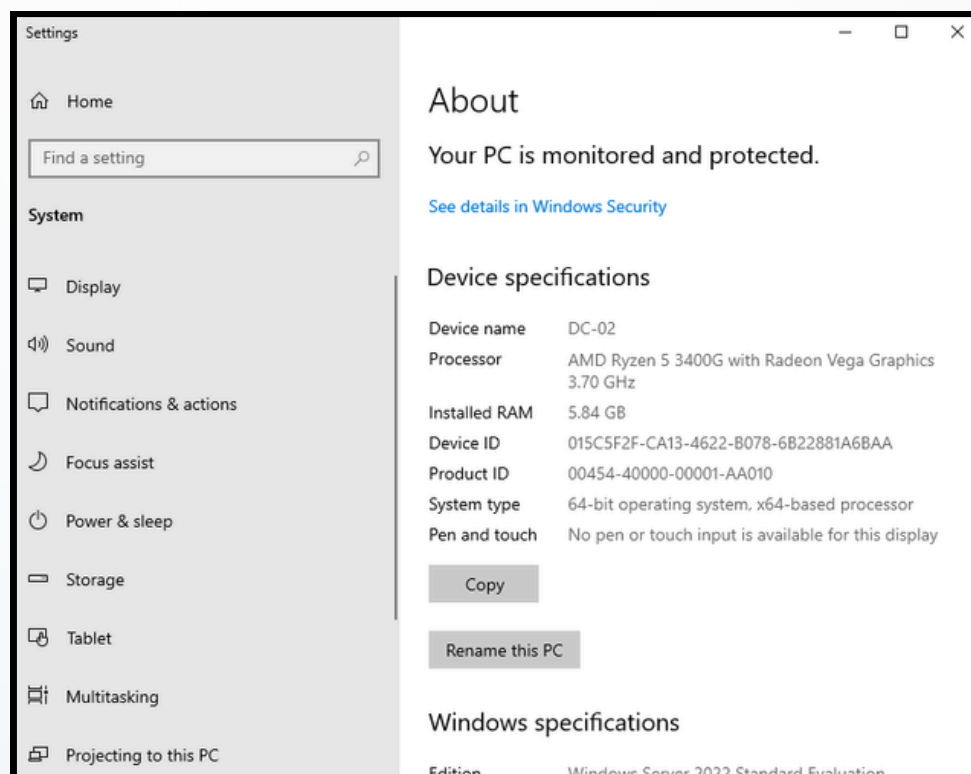

Figure 2. Renaming the Windows Server computer to DC-02 and verifying the updated computer name.

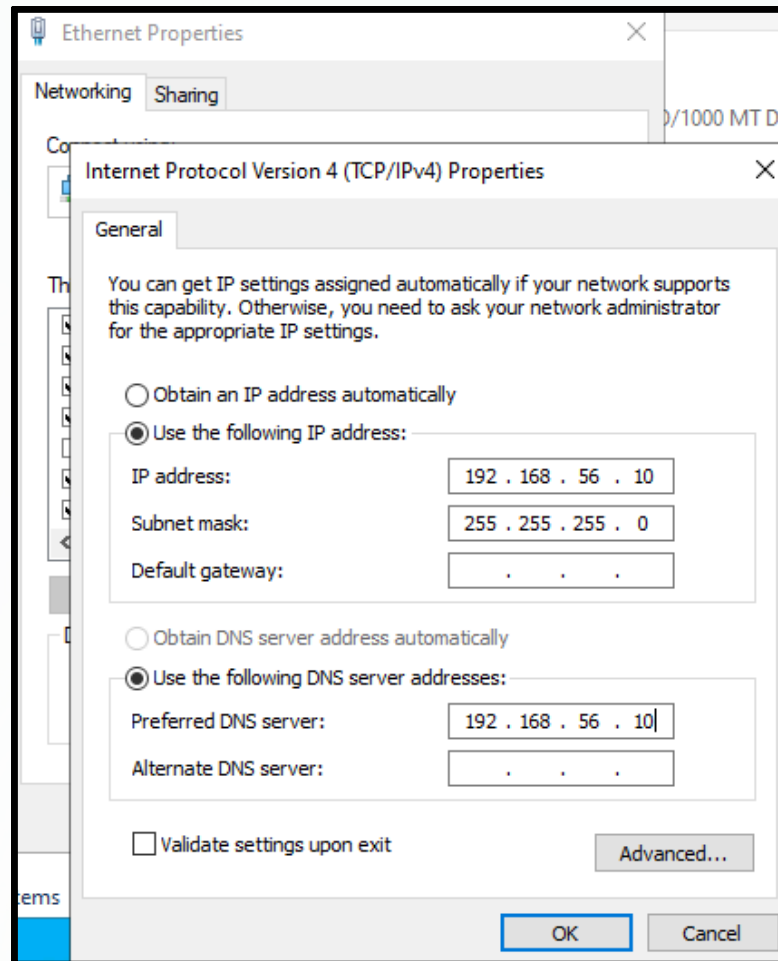

Figure 3. Configuring a static IP address and verifying the network configuration using ipconfig.

```
Administrator: C:\Windows\system32\cmd.exe
Microsoft Windows [Version 10.0.20348.587]

```

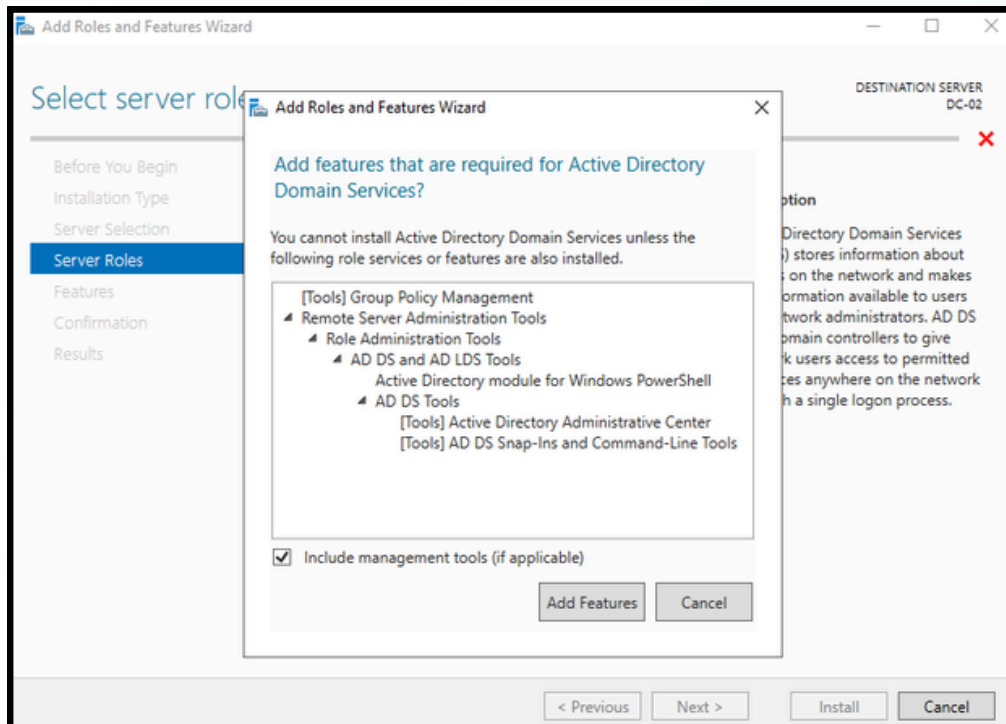

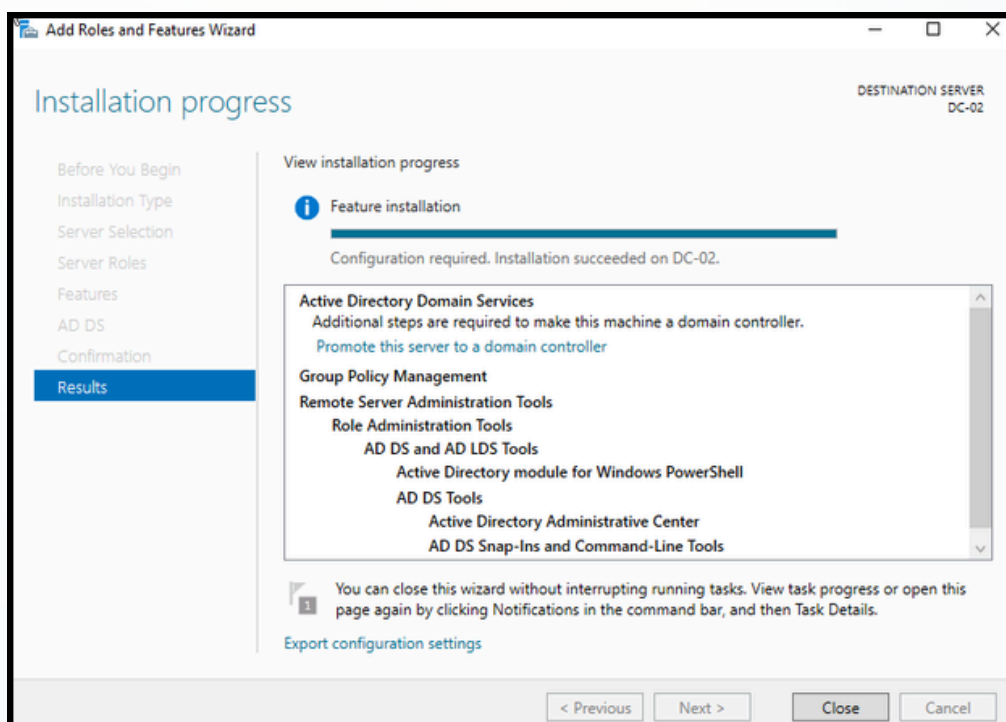

Figure 4. Installing the Active Directory Domain Services (AD DS) role.

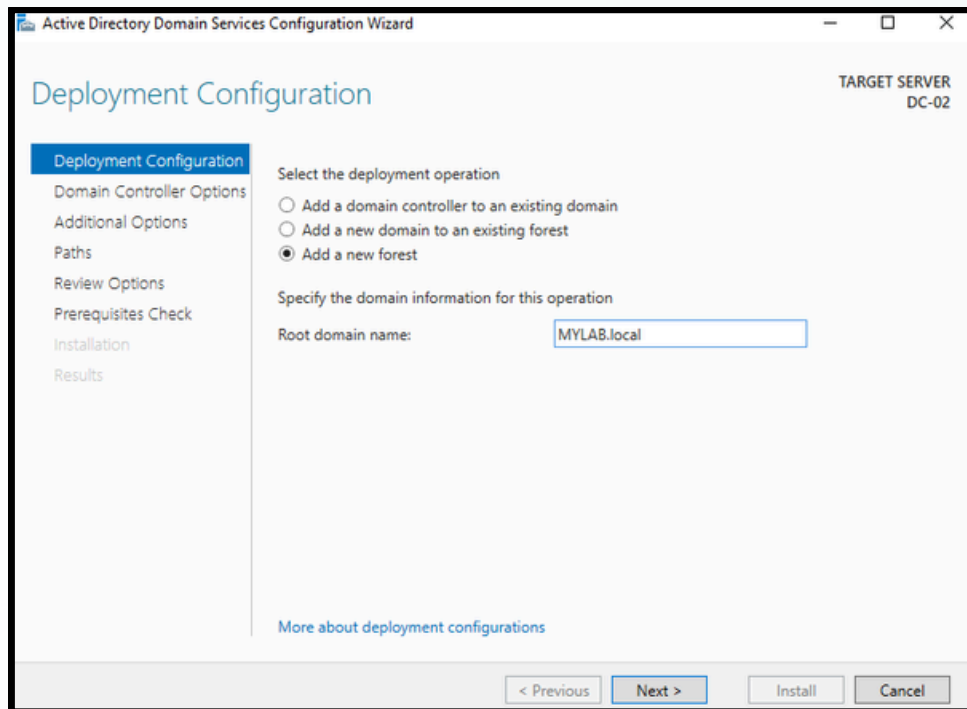

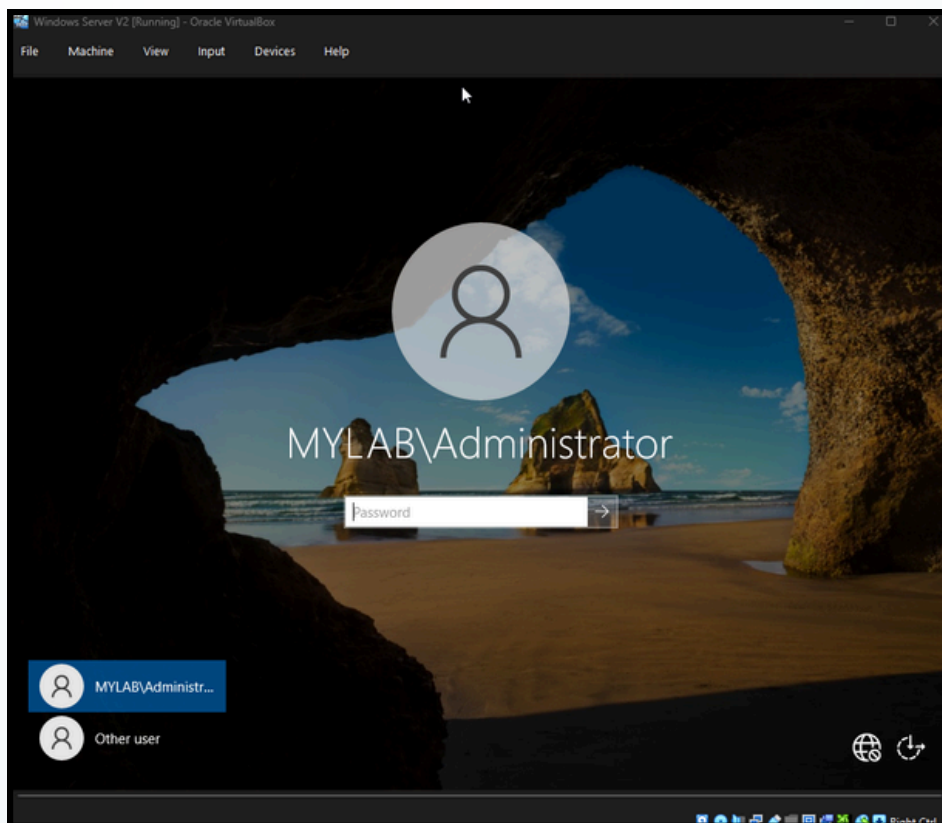

Figure 5. Promoting the server to a Domain Controller and creating the MYLAB.local Active Directory domain.

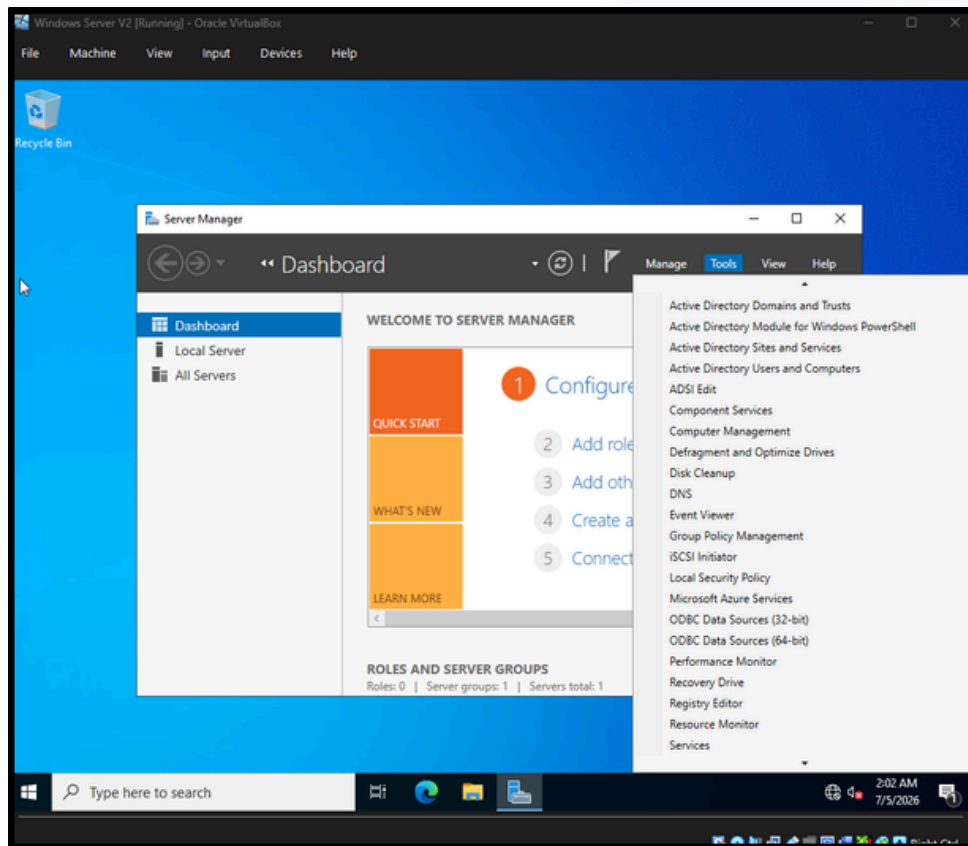

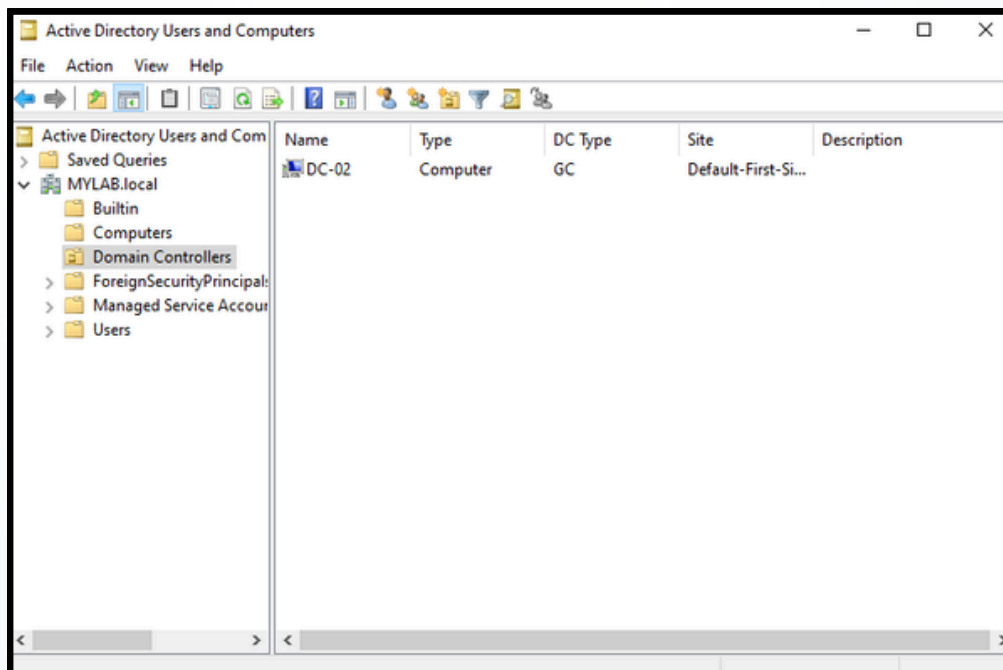

Figure 6. Verifying the successful Active Directory Domain Services (AD DS) installation and confirming that the server name is DC-02.

Conclusion

Successfully installed Windows Server 2022, configured the network settings, renamed the server to DC-02, assigned a static IP address, installed Active Directory Domain Services (*AD DS*), and promoted the server to a Domain Controller. Verified that the Windows Server 2022 environment and MYLAB.local Active Directory domain were successfully deployed and configured.

Skills Demonstrated

- Windows Server 2022 Installation
- Oracle VirtualBox
- Static IP configuration
- Active Directory Domain Services (*AD DS*)
- Domain Controller Promotion
- Active Directory Administration
